A wide range of Gerber® Good Start® infant formulas and supplements are made with two extensively studied probiotic strains

Made with *B. lactis* Bb12*

- **Clinically shown to help support the developing immune system[1-4]:**
  - Increases bifidobacteria levels
  - Increases secretory IgA
- **Clinically shown at 1x10^8 CFU/day to help support the developing immune system**
- **Recommended and clinically studied dose of *B. lactis* ensured at end of shelf life**

Made with *L. reuteri* DSM 17938

- **Clinically shown to be effective for common digestive issues[5-8]:**
  - Significantly reduces crying time in colicky infants
  - Significantly reduces frequency of spit-ups
  - Increases stool frequency in infants with functional constipation
- **Clinically shown at 1x10^8 CFU/day to be effective for common digestive issues**
- **Recommended and clinically studied dose of *L. reuteri* ensured at end of shelf life**

*Probiotic *B. lactis* is available in Gerber® Good Start® powdered infant formula and Gerber® Good Start® Gentle Everyday Probiotic & Vitamin D Drops only. Not available in liquid infant formulas. CFU=Colony forming units.
